

MONKEY LINK CONNECT

You can turn a sporty E-MTB into a bike for everyday use with just a few clicks. The components are mounted magnetically, lock into place mechanically, and are connected to the BlueDock (interface on the bike) electrically, they hereby being powered by electricity from the ebike system.

The highlight: the lighting components can be controlled at the display. MonkeyLink is compatible with all standard ebike drives from BOSCH, BROSE, SHIMANO and SR SUNTOUR.

HOW CAN I UPGRADE MY BIKE WITH ML-CONNECT?

FRONT			REAR		
STEM OR HANDLEBAR	+	V-BASE	+	LIGHTING	
		 INCL. CABLE			
			+	SEAT CLAMP	
					
				V-BASE	+
