

SKS AIR STATION

Filling station for air emergencies: the SKS pump and repair station offers cyclists the possibility to quickly reinflate a flat tyre. In addition, small defects on the bicycle can be repaired with various tools on the spot. This means that bicycle dealers, but also companies, public organisations, hotels or restaurants can offer their customers and guests a special service with the SKS pump station.

All features at a glance:

PUMP UNIT:

- Built-in AIRWORX 10.0 floor pump
- Plastic handle and waterproof pressure gauge
- MULTI VALVE head (suitable for all valve types)

TOOLS:

- Phillips screwdriver
- TORX T25 screwdriver
- Single-ended spanner, adjustable 0-24
- Allen key set 2-8 mm
- Tyre lever set with steel core
- Fastening of the tools to stainless steel cables
- Galvanised housing
- Mounting kit (4 x M10 anchor 80 mm)
- Table with air pressure recommendations

It is also possible to order a floor plate as an option. This offers a larger footprint so that the air station can be set up without screw fittings. The station therefore remains mobile. In addition, the air station can be fastened to a pillar, for example, by means of a chain.
