EN. The COMPIT STEM mobile telephone holder comprises a bayonet fitting and the mounting. It is mounted underneath the cap of the control kit of the front-end. The holder can be mounted in two directions so that the mobile telephone is unable to make contact with the knee pedalling in a standing position. Mount the COMPIT STEM system on the bicycle as follows:

1. Remove the cap of the control kit.
2. Remove the spacer should there be one.
3. Insert the COMPIT STEM mobile telephone holder.
4. Now retighten the front-end cap. Ensure that you do not exceed the NM values when tightening it.

The power bank included in the set has an integrated NFC chip and an inductive charging function.

Safety instructions:

- Depending on the mounting possibility chosen, an overhang can occur in the area of the knee. Caution: risk of falling!
- The mounting work is only to be carried out by a technically competent person. Please contact your bicycle dealer or the SKS GERMANY customer service if necessary.
